

Cardiac Imaging Frequently Asked Questions

Cardiac Studies for ConnectiCare

Why do some cardiac-related studies now require preauthorization/pre-registration?

Preauthorization/pre-registration is required to minimize radiation exposure and promote the most appropriate test for the continuum of care.

When did the program begin?

The ConnectiCare cardiac preauthorization program began on June 2000.

How does the program work?

The cardiac imaging management program assesses imaging technologies used to diagnose and monitor members with cardiac-related conditions in non-emergent cases. The program takes a comprehensive approach to determine if a recommended test is the proper next step in diagnosing cardiac-related conditions or if another test is more appropriate.

What cardiac-related imaging procedures are included in the ConnectiCare cardiac program?

Preauthorization through Evolent (formerly National Imaging Associates, Inc.) is required for the following cardiac modalities:

- Coronary Computed Tomography Angiography (CCTA)
- Myocardial Perfusion Imaging (MPI)
- MUGA Scan
- Stress Echocardiography
- Echocardiography
- Left Heart Catheterization
- Cardiac Implantable Devices (defibrillator, pacemaker)
- Cardiac Resynchronization Therapy (CRT)

What additional services are provided?

- Evidence-based algorithms to support the best diagnostic options for each member.
- Consultations with board-certified internists with specialized cardiac training and board-certified cardiologists related to elective cardiac diagnostic imaging when peer-to-peer review is required.

What do ordering providers need to do?

Ordering providers need to get preauthorization for non-emergent, outpatient:

- Magnetic Resonance Imaging (MRI)/Magnetic Resonance Angiography (MRA).
- Computed Tomography (CT)/Computed Tomography Angiography (CTA).
- Positron Emission Tomography (PET).
- CCTA.
- Myocardial Perfusion Imaging (MPI).
- MUGA Scan.
- Stress Echocardiography.
- Echocardiography (transthoracic and transesophageal echocardiography).
- Left Heart Catheterization.
- Cardiac Implantable Devices (defibrillator, pacemaker).
- Cardiac Resynchronization Therapy (CRT).

Who administers clinical oversight of the cardiac program?

Board-certified cardiologists developed evidence-based clinical guidelines and algorithms that determine the best available diagnostic pathway. These physicians consult with referring physicians to apply these guidelines and algorithms to a member's specific symptoms and medical history. By determining the most appropriate clinical imaging protocol for each member, we can reduce duplicative testing, minimize member radiation exposure, shorten diagnosis time, and improve the overall health care experience.

Is there anything I should be doing?

If you haven't done so already, please take a few minutes to register on [RadMD.com](https://www.radmd.com). This portal gives you the most expedient way to process your preauthorization requests.

What happens if I need to have an inpatient or emergent cardiac procedure performed?

ConnectiCare continues to manage inpatient and emergency cardiac procedures as is done today.

KEY PROVISIONS

- Emergency room and inpatient procedures do not require preauthorization.
